

Date:

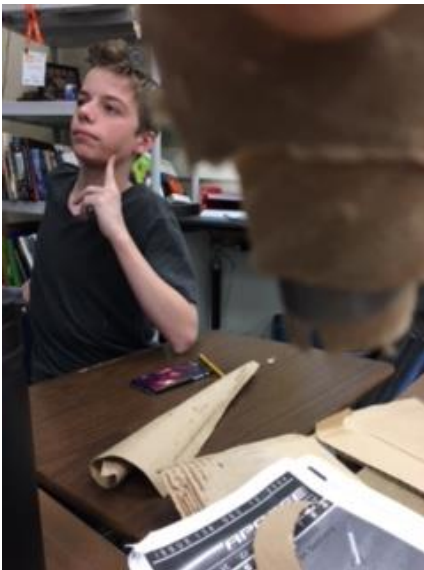

## Wednesday Challenge Form

Group Members: Mason, Raul, Jaden, Ian,

### Problem Statement:

create a model boat tail out of cardboard for a rocket. Mr. Miller gave every group a packet explaining the information and formulas needed

### Approach:

My group was extremely confused and didn't really even understand what we were supposed to do majority of the time. We ended up doing everything the last day because that's when we finally figured it out. Instead of using the formulas, Ian found a template from another team that we traced from.

**Solution:** We got assistance from another group and used their template to create our boat tails.

### Lessons Learned:

Don't waste time on unproductive things
