

Date:

Wednesday Challenge Form

Group Members: Jess and carlos

Problem Statement:

Create a design for a capital “E” and then have another mystery group fabricate it. The two teams will exchange designs and then try and build it with cardboard.

Approach:

We tried to make the design as simple as possible, so we did whole numbers that were easy to work with. We made it 10 inches tall and though that it was going to be easy, but it was actually difficult. We received a very basic design and made it as close to the sketch up as close as possible.

Solution: We fabricated the design as close as we could. To check, we used a ruler and measured all of the sides.

Lessons Learned: I learned that Carlos is good at using a box cutter. Also, make sure, you always check your work.
