## Wednesday Challenge Form

Group Members: Jason, Christian, Armen

### Problem Statement:

A group had to create a device out of popsicle sticks, a pencil, rubber bands, paper clips, a push pin, and string to move three golf balls from one paper bag to another.

### Approach:

We tried to make something similar to an egg scooper that you use for boiled eggs. We bent the paper clips to make a ring that we could scoop the balls with.

**Solution:** We made an egg scooper type contraption in order to lift up the balls and then carry them from one bag to another.

**Lessons Learned:** Make sure to test your invention properly before you do the actual run.
